Instructions for 'Whitelisting' IMBA E-Mails

IMBA members, with our new vendor for our database and website, Wild Apricot, we have discovered that many of our members are not receiving the emails we send from our new website, https://www.indianamba.org/.

The issue is often with your organization catching or quarantining those emails. To us, it looks like they have been received, but in fact you never receive them. With this, we are asking that you reach out to your IT team and request that they *Whitelist* our mail servers so that those emails are never quarantined again. *Below is what you would provide your IT Department so that they can fix the issue in one attempt:*

Domain:
wildapricot.org

Mail Server IP Addresses:
34.225.159.212
34.198.181.13
34.226.170.12
52.45.116.254
34.197.202.70
52.1.148.142
52.204.13.182
34.230.129.219
34.204.226.10
52.1.81.18

Thank you for your help with this, and if you have any issues with getting this corrected, please reach out to IMBA's Communications Committee Chair, Greg Pilling at gpilling@tcunet.com and connect him with your IT team to get it resolved.
